Organ and Tissue Donation for Transplantation Nov 29 2019 'Organ and Tissue Donation for Transplantation' is a unique book bringing together detailed analyses of the problems surrounding organ and tissue donation. The increasing number of organs that can be transplanted and the rising number of patients on waiting lists have reached the point where availability of organ donors has surpassed the immunological problems as the major challenge for transplantation. In direct response to these problems, this book addresses all aspects of organ and tissue donation and the methods used to increase donation. 'Organ and Tissue Donation for Transplantation' examines the many different approaches, both at legislative and individual levels, to improve donor rates. The inclusion of a technical section considers the practical aspects of donation and testing to prevent the transmission of disease for living organ donation, cadaver organ donation and tissue and bone marrow donation. Legal and social aspects are considered extensively, as are the various strategies used around the world to increase organ donation, from the United States and Australia, to Spain and the rest of Europe. This book will prove to be an invaluable guide for all transplant co-ordinators, organ procurement agencies, transplant units and intensive care units where knowledge of organ and tissue donation is required.

CBT for College Students with ADHD Oct 09 2020 This book provides an overview of the ACCESS program, a mental health program that has been developed and tested as an efficacious treatment for college students with ADHD. This program is at the cutting edge of clinical research, incorporating treatment strategies that allow for dissemination in real world settings in order to effectively assist college students experiencing difficulties in their academic, personal, social, and emotional functioning. As cognitive behavioral approaches have proved to be the most successful psychological treatments to date, the techniques in this volume follow that model in a detailed and nuanced fashion. The authors provide a week by week breakdown of the program, supplemented by handouts and worksheets designed to facilitate better understanding of the areas targeted by the program. Filling a notable gap in research addressing the ADHD college student population, CBT for College Students with ADHD is a crucial resource for campus mental health practitioners as well as a broad range of clinicians dealing with emerging adults.

Shared Cognition in Organizations Apr 14 2021 Written for those interested in the topic of "shared knowledge" in organizations, this edited volume brings together a variety of themes and perspectives that emerge when multidisciplinary scholars examine this important subject. The papers were presented at a conference designed to bring together behavioral scientists who were interested in the creation, conversation, distribution, and protection of knowledge in organizations. The editors bring together a distinguished group of social psychologists who have made important contributions to social cognition and group processes. They cast a wide net in terms of the topics covered and challenged the authors to think about how their research applies to the management or mismanagement of knowledge in organizations. The volume is divided into three sections: knowledge systems, emotional-motivational systems, and communication and behavioral systems. A final conclusion chapter discusses and integrates the various contributions.

Group Performance Jul 06 2020 People interact and perform in group settings in all areas of life. Organizations and businesses are increasingly structuring work around groups and teams. Every day, we work in groups such as families, friendship groups, societies and sports teams, to make decisions and plans, solve problems, perform physical tasks, generate creative ideas, and more. Group Performance outlines the current state of social psychological theories and findings concerning the performance of groups. It explores the basic theories surrounding group interaction and development and investigates how groups affect their members. Bernard A. Nijstad discusses these issues in relation to the many different tasks that groups may perform, including physical tasks, idea generation and brainstorming, decision-making, problem-solving, and making judgments and estimates. Finally, the book closes with an in-depth discussion of teamwork and the context in which groups interact and perform. Offering an integrated approach, with particular emphasis on the interplay between group members, the group task, interaction processes and context, this book provides a state-of-the-art overview of social psychological theory and research. It will be highly valuable to undergraduates, graduates and researchers in social psychology, organizational behavior and business.
