*Designing Templates and Formatting Documents* Sep 02 2022 Aesthetics isn't the only thing that you should be striving for when you design a template. When creating technical documentation, such as user manuals and online help systems, usability, readability, and simplicity are just as crucial. The design must please the eye and at the same time communicate the content clearly. Paragraph styles and character styles should be efficient to use when writing the document. The layout process should be automated as much as possible. As user assistance documents are frequently updated, an automated layout process is much more important here than in other kinds of books. For example, when you insert a new paragraph into a document, this shouldn't result in you having to manually tweak all subsequent page breaks-not to mention page numbers, cross-references, the table of contents, and the index. Setting up templates and style sheets that are efficient to use when creating and updating a document requires a lot of experience in technical writing. The rules presented in this book are the essence of this experience. All chapters provide various examples that you can use for inspiration and as starting points for your own designs. Topics covered: Layout basics; Setting the type area; Choosing fonts and spacing; Avoiding manual formatting; Creating semantic styles; Organizing styles hierarchically; Recommended screen layouts; Recommended page layouts; Recommended table designs; Recommended paragraph styles; Recommended character styles. Audience: technical writers, developers, marketing professionals, product managers, designers.

**Handheld and Ubiquitous Computing** Jun 26 2019 Truly personal handheld and wearable technologies should be small and unobtrusive and allow access to information and computing most of the time and in most circumstance. Complimentary, environment-based technologies make artifacts of our surrounding world computationally accessible and facilitate use of everyday environments as a ubiquitous computing interface. The International Symposium on Handheld and Ubiquitous Computing, held for the first time in September 1999, was initiated to investigate links and synergies in these developments, and to relate advances in personal technologies to those in environment-based technologies. The HUC 99 Symposium was organized by the University of Karlsruhe, in particular by the Telecooperation Office (TecO) of the Institute for Telematics, in close collaboration with ZKM Karlsruhe, which generously hosted the event in its truly inspiring Center for Arts and Media Technology. The symposium was supported by the Association of Computing Machinery (ACM) and the German Computer Society (Gesellschaft für Informatik, GI) and held in cooperation with a number of special interest groups of these scientific societies. HUC 99 attracted a large number of paper submissions, from which the international programme committee selected 23 high-quality contributions for presentation at the symposium and for inclusion in these proceedings. In addition, posters were solicited to provide an outlet for novel ideas and late-breaking results; selected posters are also included with these proceedings. The technical programme was further complemented by four invited keynote addresses, and two panel sessions.
